riskbeyond.com

What does a typical risk management framework look like...

Risk management process and its nuances...

Identify

Strengthen detection via early warning models and constant far out identification of emerging risks

Measure

Implement quantifiable behavioural metrics

Mitigate

Escalate and collaborate with business (1.5 LOD) to address behavioural issues via action on demand

Monitor

Establish monitoring of control effectiveness

Report

Automated risk view for decisioning

My views on how to innovate and transform within and across risk value chain to strengthen risk culture...

Anchor enterprise risk management from both risk and opportunities perspective:

- Shift risk conversations beyond managing and pre-empting risks

When identifying and assessing risk & growth opportunities, you need to look at both:

- External data: News, regulatory / demand shifts, financials market positions, third party exposures
- Internal data: Standardise risk register descriptions e.g risk A causing B with impact C

Preemptive early warning signals to sharpen KRIs and identify areas where we can place greater bets on

Clear and concise management / board risk reports (bottom line up-front messaging) to aid decisioning

Deep Dive Into Risk Culture

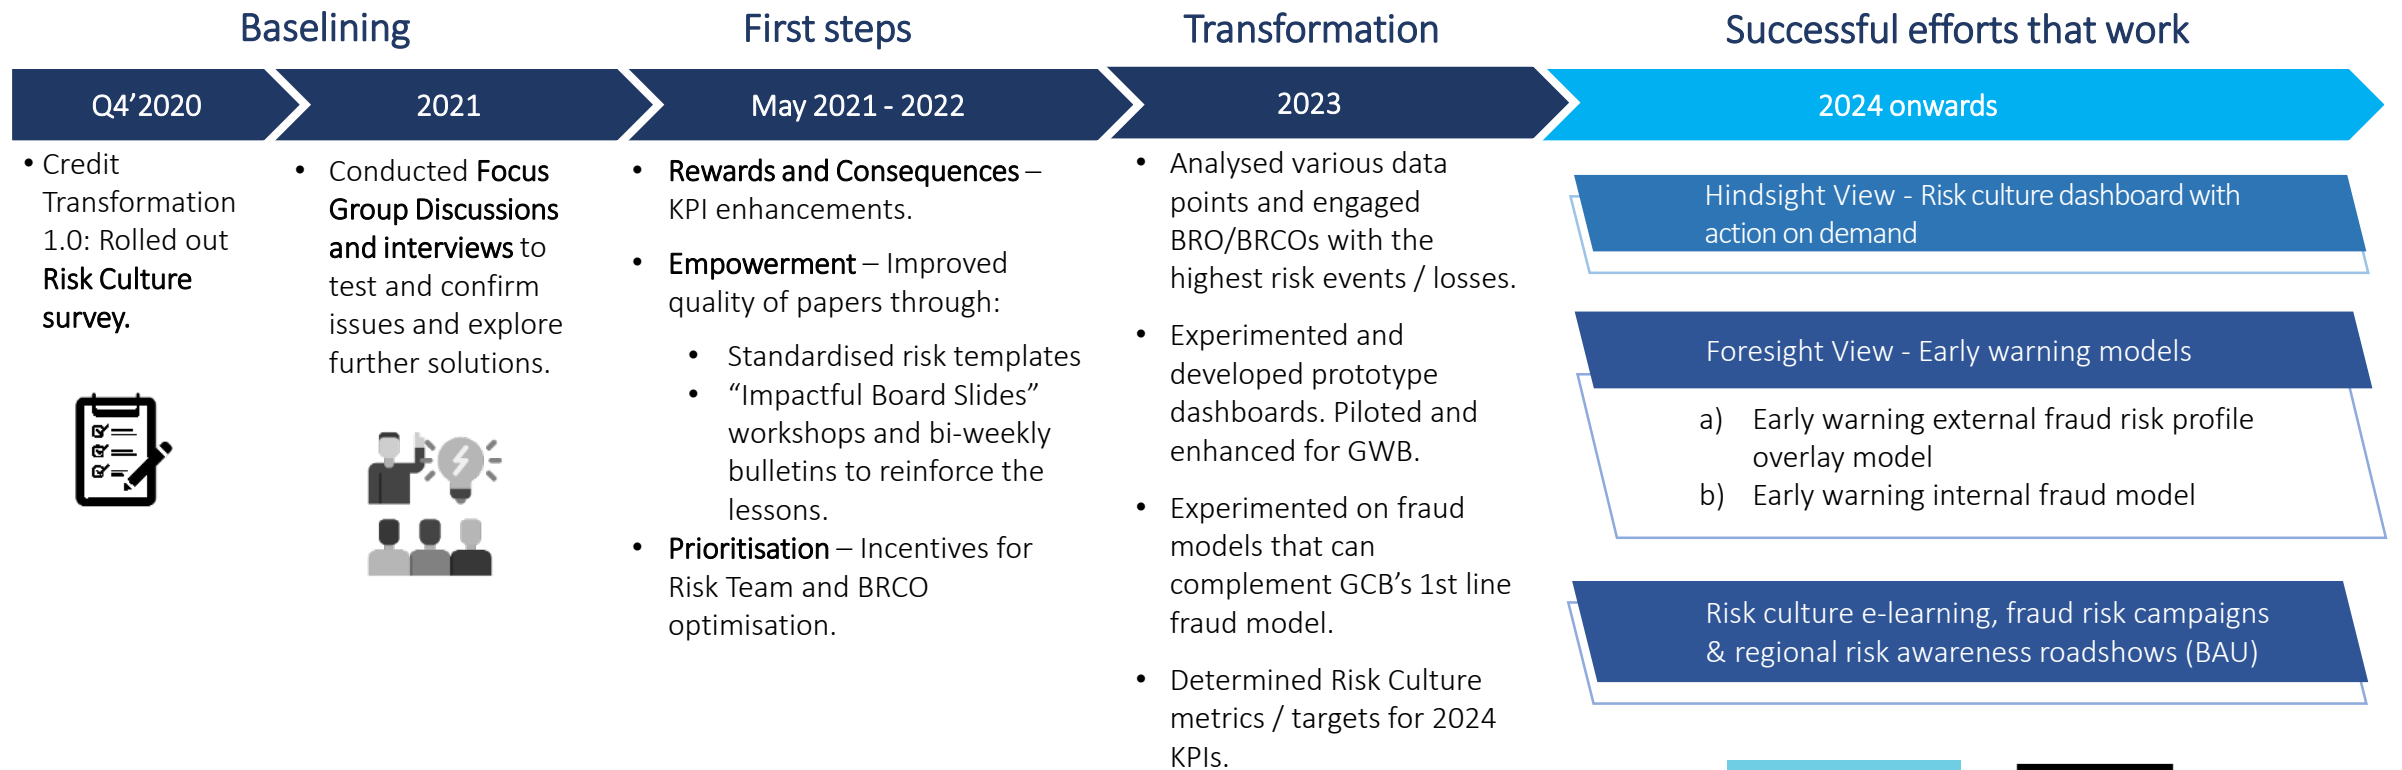

Risk Beyond Is Hosted by
Enterprise Risk Management Academy
www.erm-academy.org

riskbeyond.com

Our Risk Culture journey thus far

RHB has undergone various risk culture efforts since 2020 and has taken a data driven insights approach to drive action on demand.

Sample Hindsight view - Risk culture dashboard with action on demand

- a Overview of the status and details of detected and reported loss events for targeted monitoring
- b Detailed analysis of the detected and reported loss events – Analysis highlighted the trend, frequency and root causes
- c Ease tracking of open events enabling the Business Risk Officer to focus on insight generation

The practical approach - data driven insights tracked via clear metrics

Risk Culture Programme KPI metrics	
a	Reduction of repeated loss incidents
b	Reduction of high risk audit findings
c	Reduction of internal fraud incidents

- Better enables the Business Risk Officers to act early.
- Prompts for action via the good, bad, ugly view.
- Provides first and second line of defense to have meaningful and targeted conversations.
- Actions are tracked and effectiveness monitored over a period of time.
- When things don't work, we go back to the drawing board to ideate solutions / actions.

An example of an early warning external fraud risk customer profile- 2nd LOD view

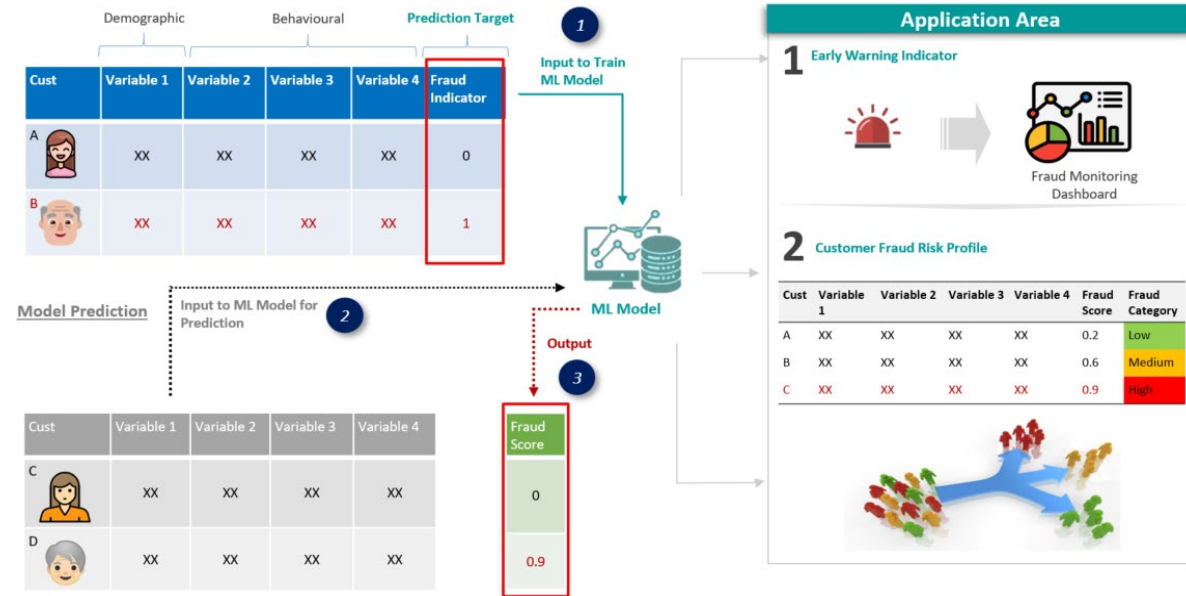

Results

Based on our pilot results from January 2024 to May 2024:

1. The model's potential capture rate of undetected fraud victims averaged 43% over the 5-month pilot period.
2. This equates to **additional RM XX million per annum** in loss prevention.
3. Fraud victims classified in the high and medium risk groups also tend to incur larger losses compared to those classified as low risk.
4. Besides improving fraud detection, the model can be used for proactive fraud management. The results show that by targeting 2% of the customers, we capture 29% of all fraud victims (including both detected and undetected cases).

Objective

1. Develop **customer fraud risk profiles** to improve early detection and complement 1LOD detection mechanisms.
2. **Improve Risk Prioritization** with key focus on high risk customers
3. Enhance **fraud detection rules to minimize potential financial losses** from fraud and scams.

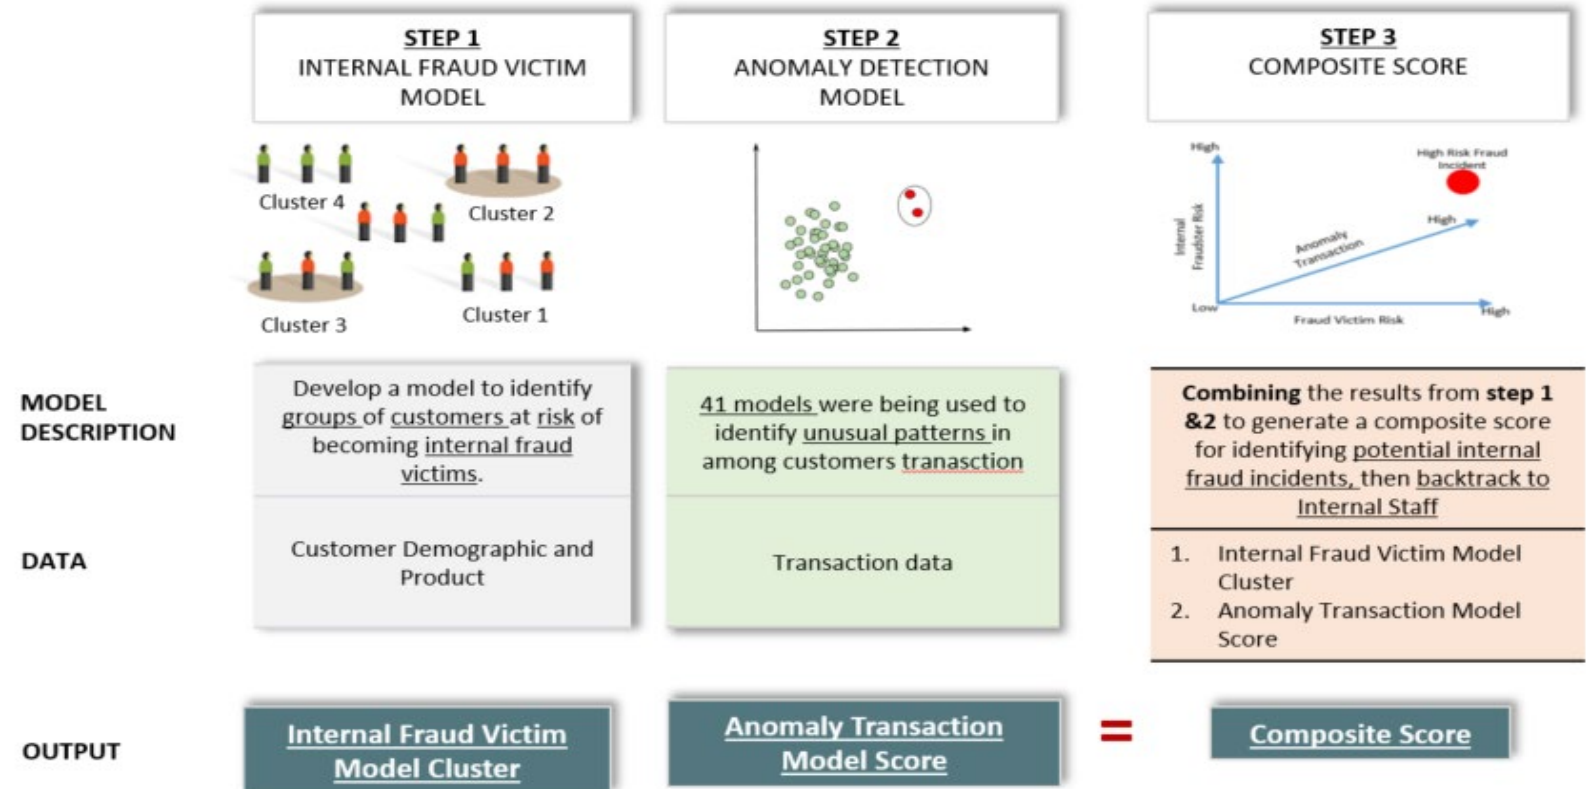

Behavioural insights driving early warning internal fraud models

Results

Based on our back-testing results, we demonstrated that:

1. The model flagged X internal staff with a high-risk customer base, which included all reported internal frausters.
2. This resulted in potential loss prevention amounting to RM x million.

Risk analytics (beyond regulatory) - Experimentation sprints – Gen AI

We conducted experiments with technology vendors to understand and exploit the capabilities of generative AI for our risk management teams, aiming to prove the value before proceeding to full implementation.

Generative AI Workshop

- Introduction to Gen-AI capabilities in banking.
- Use cases Discussed: AI Transaction Risk Credit Approval, Intelligent Portfolio Management.
- Brainstorming on Gen-AI RHB Monthly Risk Story Automation Use Case. Detailed the architecture, building blocks, summarization, top stories shortlisting, and report generation.

Feb'
2024

Generative AI GIL Analysis POC

- Experimenting with generative AI in Gross Impaired Loans (GIL) analysis.
- The objective of the POC is to test Generative AI capability to perform current trend analysis and forward-looking predictions.
- The initiative aims to complement existing GIL analysis by human analysts and automate manual tasks.

Apr'
2024

Jun'
2024

- Introduction to Gen-AI capabilities and related banking use cases: AI-powered Wealth Coach, summarization of financial and regulatory compliance reports
- Exploring Gen-AI capabilities in tabular data analysis, trend analysis, and provide commentary insights.

Our big win (2) Runner up for risk culture category, ASEAN Risk Awards 2024

ASEAN Risk Awards 2024 - RHB Banking Group awarded **Runner Up for Risk Culture** category. This award is given to the organization that promotes an effective and efficient way to optimize the organizational learning process in building proactive and risk-based decision-making in every organization's individual.

Our efforts to cultivate risk culture with in-house built solution backed by behavioural analytics / insights has put us in the forefront amongst our risk peers in driving risk culture with prompt action.

The ASEAN Risk Awards 2024 is hosted by ERMA (Enterprise Risk Management Academy), a global learning center for professionals in Enterprise Risk Management. Judges were independent Board members across Europe and the ASEAN Risk Awards has been in place since 2016.

Conclusion

1 Work with first line to customize triggers / solutions to manage and mitigate risks

2 Pause and pull the plug on nonsensical reports / low value work – see what happens

3 Apply agile principles – run short sprints and experiment – Gen AI
